PORTABLE HIGH-TECH WATER MIST SYSTEM - BATTERY OPERATED -
FOR FIRST RESPONSE FIRE FIGHTING IN NAUTICAL ENVIRONMENTS
WITH SPECIAL NOZZLE

**BATTERY
ENERGY**

For more information refer to our document: **UP 1678**

Description

BMFS is the fastest and most effective system for first response fire fighting in nautical environments. It is very reliable, ready to use, completely autonomous and extremely effective for rapid and precise extinguishing operations.

BMFS uses a minimal quantity of water; thanks to its WATER MIST technology, it is able to extinguish a fire **using 90% less water**, compared with traditional extinguishing systems.

CRISTANINI PATENTED lance included in this system generates a high-pressure WATER MIST which exits from a special ruby nozzle. The WATER MIST sprayed onto the fire immediately becomes vapour, increasing its volume by 1800 times.

This results in the saturation of the atmosphere and the removal of oxygen from the fire, rapidly reducing its size and temperature, bringing it quickly under control.

Capabilities

BMFS is a fully self contained unit, no external water supply or componentry is needed as BMFS has an integrated water tank containing premixed product. All components are protected from saline aggression to avoid any risk of corrosion.

Technical characteristics

Dimensions (LxWxH)

700 mm (28 in) x 300 mm (12 in) x 520 mm (20 in)

Weight

41 kg (90 lb)
